FREE KIT · 9 PAGES

Vibe coding · design references

The Reference Kit

Seven websites that fix your vibe-coded design. And how to hand each one to Claude.

template → one reference → premium

Ask AI for a landing page and you get **the average of a thousand templates**: the same purple gradient, the same hero, the same footer. Good design needs a reference. These seven sites are that reference. Walk down your page from the navbar to the footer, go inside it (icons, motion), then hand Claude **the whole design system** in one file.

7 sites · **1** DESIGN.md · **4** ways to hand it over · **0** design courses

Walk down your page

then into it, then its DNA

1 NAVBAR → 2 HERO → 3 CTA → 4 FOOTER → 5 ICONS → 6 MOTION → 7 DESIGN.MD

The seven

SITE	FIXES	YOU HAND CLAUDE	COST
1 Navbar Gallery `navbar.gallery`	Navbar	A screenshot of a navbar you like	Free to browse.
2 Supahero `supahero.io`	Hero	A screenshot of a hero you like + one line about your product	Open to browse.
3 CTA Gallery `cta.gallery`	CTA	Your goal + a screenshot of a CTA that fits it	Free to browse.
4 Footer Design `footer.design`	Footer	A screenshot of one footer style + what it must hold	Free to browse.
5 3D Icons `3dicons.co`	Icons	3–6 icon files (PNG) in your project	Free under CC0: personal and commercial use, no attribution.
6 Scrolltide `scrolltide.co`	Motion	One template's build prompt	Some templates are free.
7 Refero Styles `styles.refero.design`	DESIGN.md	One DESIGN.md file in your project	Open to browse.

Four ways to hand a reference to Claude

WAY	SITES	HOW
A screenshot	1 · 2 · 3 · 4	Attach it and say *"make mine like this one"*. Claude copies the pattern: structure, spacing, hierarchy.
Files	5	Put the assets in your project (`public/icons/`) and tell Claude where they are and what they replace.
A build prompt	6	Paste someone's finished prompt, let it build, then swap in your content.
A DESIGN.md	7	One file at the root of your project. Every page Claude builds after that follows it.

Short on time? Do Number 7 first (page 8), then page 9's 30-minute session. One file fixes most of the page; 1–6 fix what still looks generic.

Navbar Gallery

1

IT FIXES

the first thing anyone sees. A template navbar (logo, four links, one purple button) says "AI made this" before they read a word.

YOU GIVE CLAUDE

A screenshot of a navbar you like

→

YOU GET

Your navbar rebuilt in that style, with your links and logo

WHAT'S ON IT

Real-site navbars sorted by type: Static, Dropdown, Mega Menu, Side Bar, Search Bar, Announcement, Full Screen, Breadcrumbs. Each entry links to the live site, so you can open it and see the menu move.

COST

Free to browse. No price on the site.

USE IT

1. Pick the type you need. Most sites want **Dropdown** or **Mega Menu**.
2. Open the live site of the one you like. Narrow the window to see its mobile menu too.
3. Screenshot the navbar, and its open dropdown if it has one.
4. Paste the screenshots into Claude with the message below.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
Here's a navbar I like (screenshot attached). Rebuild the navbar of my site in this style: same
structure, spacing and feel.
Keep my logo, my links and my brand colours.
If it has a dropdown or a mega menu, build that too, plus a mobile menu.
Show me the result, then list what you changed.
```

DONE LOOKS LIKE

Your navbar stops looking like every other AI site: the type, spacing and dropdown come from a real product.

WATCH OUT

Copy the pattern, not the brand. Keep your own logo, name and colours.

Supahero

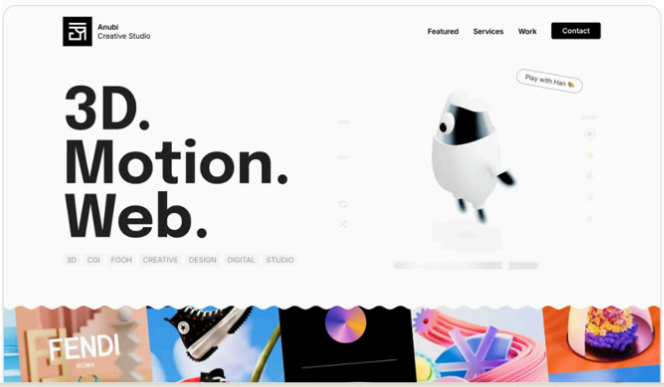

2

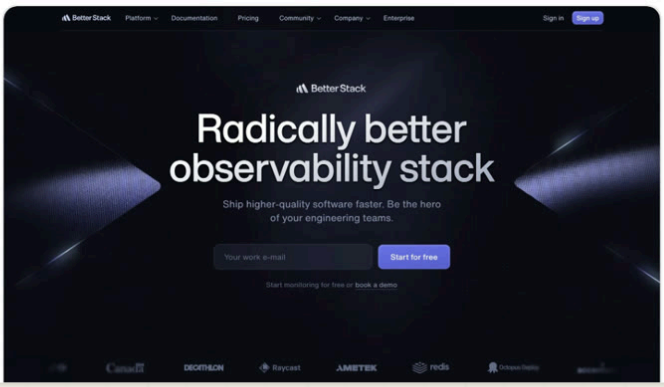

IT FIXES

the hero: the part where people decide to stay or scroll away. “Build faster with AI” on a purple gradient makes them scroll.

supahero.io

Curated collection of beautiful website hero sections.

YOU GIVE CLAUDE

A screenshot of a hero you like + one line about your product

→

YOU GET

A hero with a clear order: one headline, one visual, one main button

WHAT'S ON IT

A curated library of website hero sections, including Linear, Stripe, Notion, Tesla and Webflow, plus many studios. Supahero is now part of screensdesign.com.

COST

Open to browse. The site has a Pricing page, so some features may be paid.

USE IT

1. Scroll until one makes you stop. Note why: the headline size? the visual? one button instead of two?
2. Screenshot it.
3. Write one line about your product in plain words: what it does, for whom.
4. Send both with the message below. Ask for three headline options and pick one.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
This is a hero section I like (screenshot attached). Redesign my hero to follow it: headline size and
line breaks, where the visual sits, how many buttons, how much empty space.
My product, in one line: [what it does, for whom].
Write the headline in the same tone, 6 words or fewer. Give me 3 options.
```

DONE LOOKS LIKE

Someone lands on your page and knows in three seconds what it is and what to click.

WATCH OUT

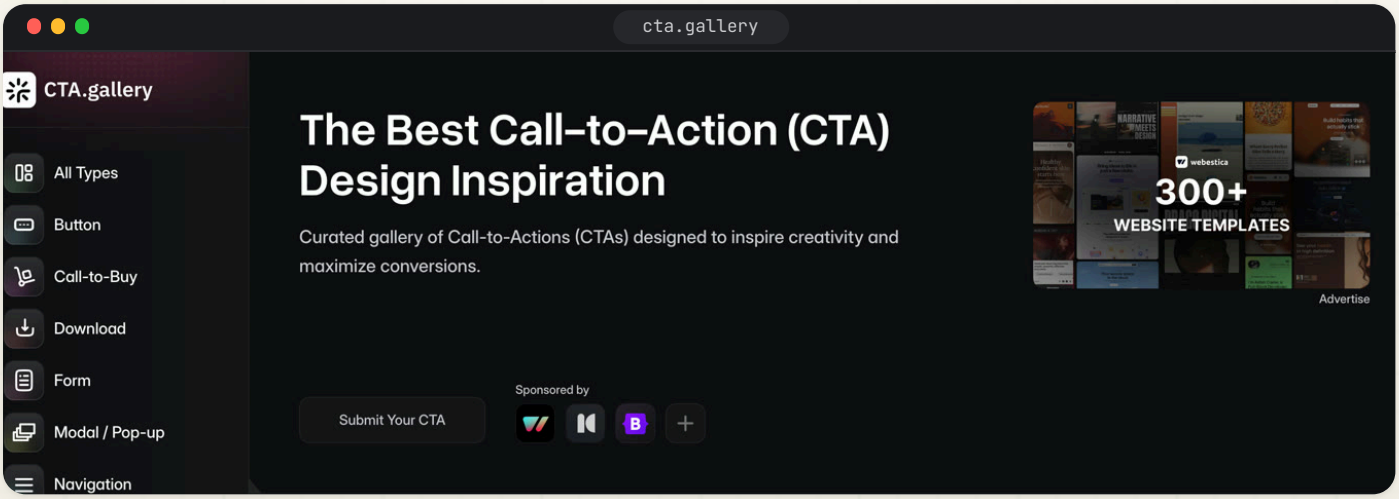

Study it, or steal the layout. Don't copy their words or their images.

CTA Gallery

3

IT FIXES

the call-to-action. If nobody clicks the button, the site has no value, and a flat purple “Get started” is easy to ignore.

YOU GIVE CLAUDE

Your goal + a screenshot of a CTA that fits it

→

YOU GET

A CTA section built for that one goal

WHAT'S ON IT

Call-to-action designs from real sites, sorted by type: Button, Call-to-Buy, Download, Form, Modal / Pop-up, Navigation, Newsletter, Pricing / Subscription. Filter by industry, and by light or dark mode.

COST

Free to browse.

USE IT

1. Decide the **one** thing this page should get: a sign-up, a demo request, a newsletter email, a purchase.
2. Open that category (Newsletter, Pricing, Form...) and filter by your industry.
3. Screenshot the one closest to what you need.
4. Send it with your goal and the message below.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
The goal of this page: [sign-ups / demo requests / newsletter emails / purchases].
Here's a call-to-action pattern I like (screenshot attached). Rebuild my CTA section like it.
One primary button with a specific label (not "Get started"), and one line of microcopy under it that
removes a doubt (price, time, card needed?).
Keep it consistent with the rest of my page.
```

DONE LOOKS LIKE

The button says exactly what happens next, and the line under it answers the question that stops people clicking.

WATCH OUT

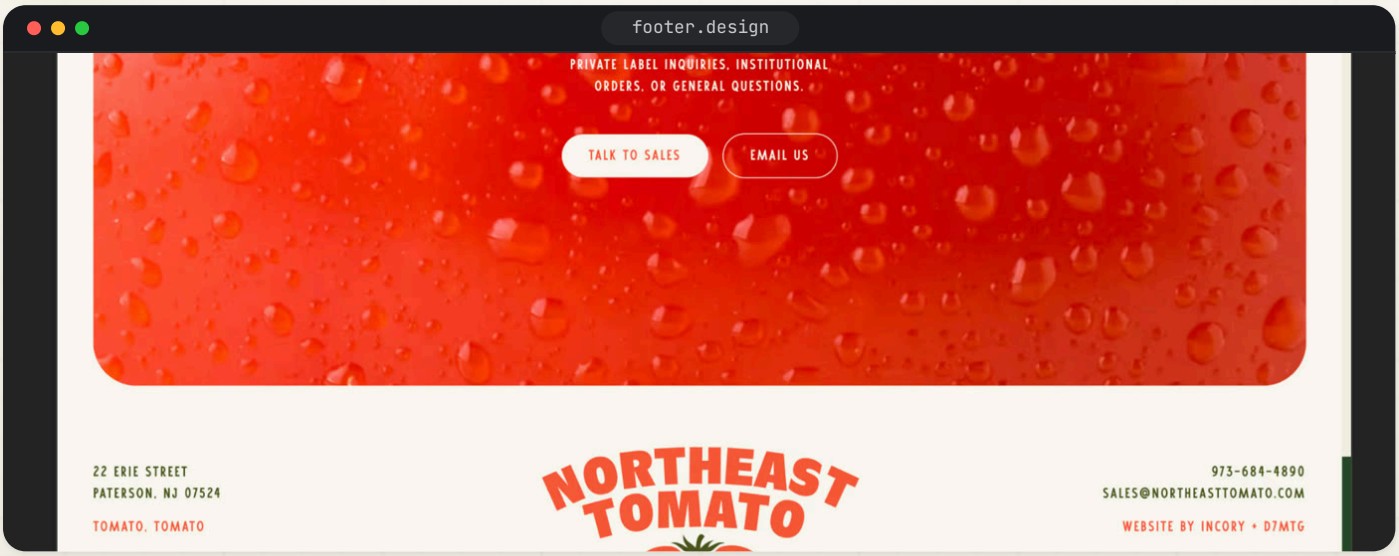

One goal per CTA. Two equal buttons split the clicks.

Footer Design

4

IT FIXES

the footer. The difference between a premium site and a template site is often in the footer: “© 2026 · Privacy · Terms” in grey gives the template away.

YOU GIVE CLAUDE

A screenshot of one footer style + what it must hold

→

YOU GET

A footer with a clear structure: wordmark, link columns, contact

WHAT'S ON IT

Footers only, sorted by style: Typographic, Small Type, Illustrative, Grid, Flat, Animated, Cards, Bright, Dark, Large Type, Bold. Its tagline: “The only footer gallery on earth.”

COST

Free to browse.

USE IT

1. Pick one style that suits your brand. **Large Type** and **Grid** are the safest.
2. Screenshot one example.
3. List what your footer must hold: links, contact, socials, legal.
4. Send both with the message below.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
Here's a footer style I like (screenshot attached). Replace my footer with this style.
It must hold: [my links], [email / phone / address], [socials], the © line, Privacy and Terms.
Make the wordmark large, like the example. On mobile, stack the columns and keep it short.
```

DONE LOOKS LIKE

Your page ends like it was designed on purpose, not cut off.

WATCH OUT

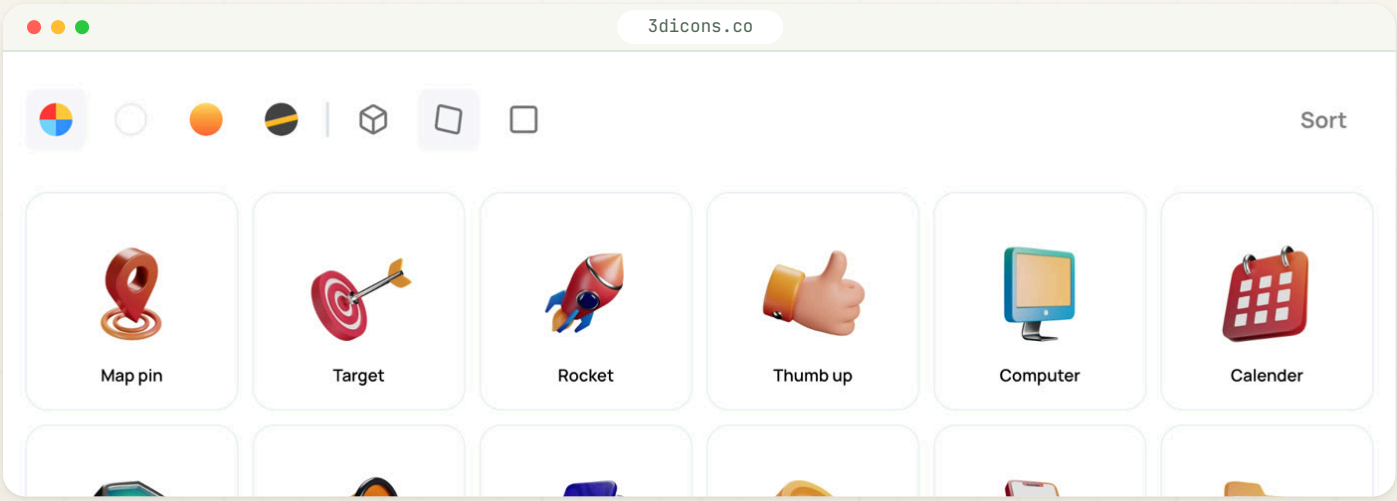

Keep the legal links. A beautiful footer still needs Privacy and Terms.

3D Icons

5

IT FIXES

the feature icons. Flat line icons in three identical cards are the **second-fastest giveaway** after the purple gradient.

YOU GIVE CLAUDE

3–6 icon files (PNG) in your project

→

YOU GET

Feature cards with real 3D icons, sized and placed right

WHAT'S ON IT

Hand-made 3D icons with 1,400+ renders (different angles and colours); the v1 collection alone has 122 icons. Figma file and Figma plugin. A Pro tier adds online recolouring and angle edits.

COST

Free under **CC0**: personal and commercial use, no attribution. The Pro tier is paid.

USE IT

1. Find icons that match your features (search works: rocket, shield, chart...).
2. Pick **one** angle and one colour style for all of them. Mixed styles look cheap.
3. Download the PNGs into your project, for example `public/icons/`.
4. Send the message below.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
In public/icons/ there are 3D icons: [rocket.png, shield.png, chart.png].
Replace the flat line icons in my features section with these, one per card, in this order: [feature → icon].
Size them 64–80 px, no extra background or border, and keep the card layout.
Check they look sharp on a retina screen.
```

DONE LOOKS LIKE

Your feature cards look like a product page, not a starter template.

WATCH OUT

One style across all icons: same angle, same colours.

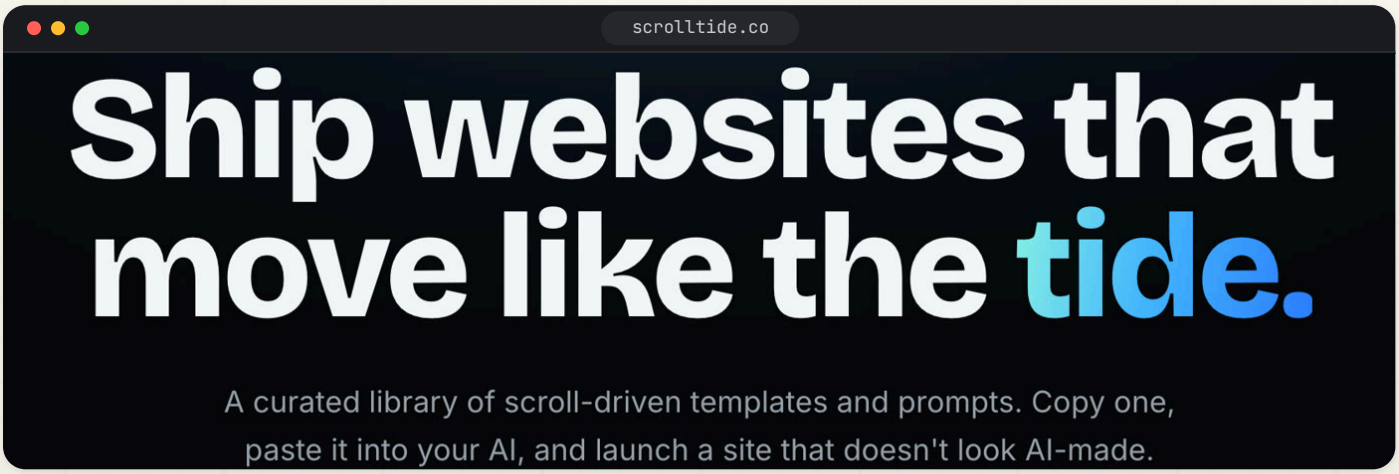

Scrolltide

6

IT FIXES

the stillness. Sites where 3D objects turn and sections flow in as you scroll feel premium. A static AI page doesn't.

YOU GIVE CLAUDE

One template's build prompt

→

YOU GET

A scroll-driven page with your content in it

WHAT'S ON IT

124 scroll-driven templates (on 18 Oct 2026), plus components and shaders. Each template comes with a full build prompt of about 12,000 characters (art direction, type, motion, layout, accessibility) and the source code. The prompts are written for Claude, Cursor and v0.

COST

Some templates are free. The full library is paid ($39/month, $144/year, or $299 lifetime in early access, when we checked).

USE IT

1. Start with a **free** template close to your site's mood.
2. Copy its build prompt.
3. Paste it into Claude Code or Cursor, in a fresh project or a new branch. Let it build.
4. Then send the message below to swap in your content.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
(after the template's build prompt has run)

Now use my content instead of the placeholders:
Brand: [name]. Headline: [my hero line]. Sections: [list them].
Keep the motion, respect prefers-reduced-motion, and keep it fast on mobile.
```

DONE LOOKS LIKE

Scrolling your page feels alive: sections arrive instead of just sitting there.

WATCH OUT

Motion is the last 10%. Fix navbar, hero, CTA and footer first, and try the free templates before you pay.

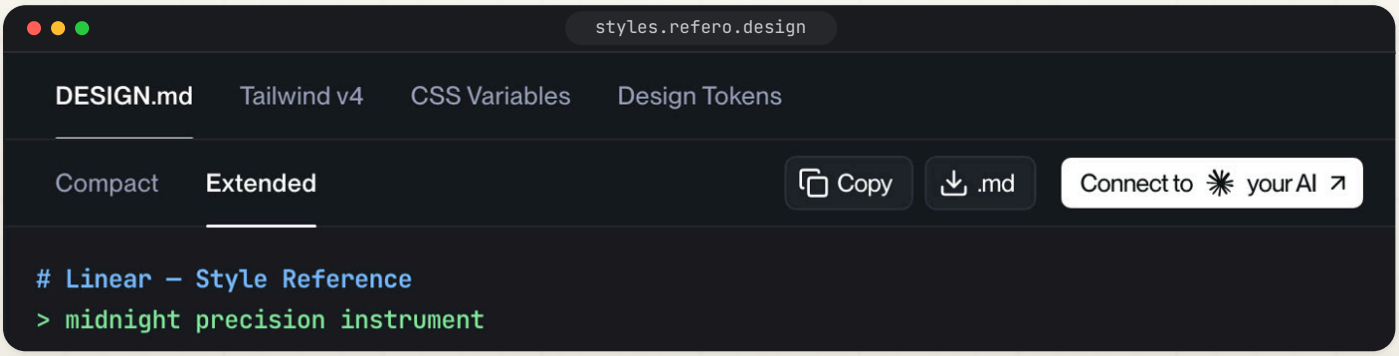

Refero Styles

IT FIXES

7

everything at once. This isn't a section, it's the whole site's DNA: one file that tells Claude your colours, fonts, spacing and components, so every page it builds follows one system.

YOU GIVE CLAUDE

One DESIGN.md file in your project

→

YOU GET

Every page Claude builds, in that style. No more "make it look premium"

WHAT'S ON IT

2,000+ AI-readable design systems taken from leading product websites (Apple, Linear, Cursor, ElevenLabs...). Open a style for its colours, typography, spacing and components, and copy it as a DESIGN.md (or as Tailwind v4, CSS variables or design tokens).

COST

Open to browse. We didn't find a price for Styles on the pages we checked.

USE IT

1. Pick a style close to the mood you want. The search takes plain words: "like Vercel", "trustworthy fintech".
2. On the style page: **DESIGN.md → Extended → Copy**.
3. Save it as `DESIGN.md` at the root of your project.
4. **Claude Code:** add one line to `CLAUDE.md`: "Follow DESIGN.md for all UI." **Lovable / Cursor:** paste it into the project's knowledge or rules.
5. Send the message below.

THE FIRST MESSAGE · COPY-PASTE INTO CLAUDE

```
Read DESIGN.md. From now on, every page and component you build follows it: colours, typography,
spacing, radii, components.
Start by restyling my home page to match it. Don't change my content or structure.
Then list anything in my code that breaks the system (hard-coded colours, random font sizes) and fix it.
```

DONE LOOKS LIKE

You ask for a new page and it already looks like the rest of the site. You never type "make it look premium" again.

WATCH OUT

Use the system, not their brand: swap in your own name, logo and accent colour.

Put it together

30

THE ORDER

Number 7 first. One DESIGN.md fixes most of the page. Then use 1–6 only where it still looks generic, top to bottom.

STEP	TIME	SITE	WHAT YOU DO
1 · Set the system	10 min	7 Refero Styles	DESIGN.md in, home page restyled, rule added to CLAUDE.md
2 · Fix the top	10 min	1 Navbar Gallery · 2 Supahero	Navbar and hero from two screenshots
3 · Make it convert	5 min	3 CTA Gallery	One CTA for one goal
4 · Finish the bottom	5 min	4 Footer Design	Footer with a large wordmark
5 · Polish, later	when ready	5 3D Icons · 6 Scrolltide	3D icons first, motion last

THE SESSION IN FOUR MESSAGES · COPY-PASTE INTO CLAUDE

```
1. Read DESIGN.md. From now on every page and component follows it. Restyle my home page to match it without changing the content.
2. Here are two screenshots: a navbar and a hero I like. Rebuild my navbar and hero in their style, inside the DESIGN.md system.
3. The goal of this page is [one goal]. Here's a CTA pattern I like. Rebuild my CTA section like it: one specific button, one line of microcopy.
4. Here's a footer style I like. Replace my footer with it. Then check the whole page against DESIGN.md and fix anything off-system.
```

The one rule

AI has no taste. But give it a reference and it copies taste very well. The difference between a template site and a premium one is **one reference**.
